

FOR IMMEDIATE RELEASE NEWS
Migraine Monitor App Introduces New Features

Health Monitor Network's latest App update offers unprecedented functionality designed to support improved headache management

(Montvale, N.J.: November 8, 2018) [Health Monitor Network®](#) (HM), the leading direct-to-patient (DTP) company in the United States for 35 years, announces the release of the critically acclaimed Migraine Monitor® app v4.0. The [Migraine Monitor®](#) app provides an innovative platform for migraine sufferers to track and manage their headache symptoms.

Migraine Monitor® was first developed and launched two years ago by HM, with oversight and expert input from Dr. Lyle Dennis, HM's chief medical officer and a practicing neurologist. Since its inception, the platform has evolved based on the valuable feedback from patients and physicians. It has served to help thousands of migraine sufferers address the cause of their headaches.

The system features a specialist's platform allowing clinicians to view their patients' headaches and progress between office visits. When combined with the core features that allow patients to track their triggers, record their headaches and manage their treatments, the result is a powerful synergy that delivers real-time data from patients to their specialists seamlessly.

The Migraine Monitor® app v4.0 is designed to offer improved functionality and interface through several engaging new features. Users can now dynamically measure the severity of a headache and the effectiveness of the medications taken during an on-going headache.

Weather data is now shown for all days on the reports, even if you don't record a headache, so that you can see correlations between temp/pressure/humidity and your next headache. The latest version also offers an optional feature that allows patients to track their mood using an industry approved 7-point scale.

"Our latest release of Migraine Monitor® is the culmination of many years of practice and experience managing migraine patients," says Dr. Dennis. "It offers an unprecedented tool for allowing neurologists, and their teams, to deeply understand and manage their migraine patients."

Migraine Monitor® continues to be favorably recommended by and has contributed to prominent neurology focused organizations such as, the [National Headache Foundation](#), [the Migraine Research Foundation](#), the [Association of Migraine Disorders](#), and [Migraine Again](#).

Specialists can register their dashboard at migrainemonitor.com and patients can download the app for free on Google Play and the Apple App Store.
